We ate 81 and 74 and work hard to keep our water usage below 100 l/ day. But we still must pay the rather high services charges.

In order to encourage people like us to conserve water, it is essential to:

1. reduce services charges
2. Allow lower income people the first 100 l/ day free.
3. Increase pricing as usage increases.
4. Have concessions for single patents with 1,2 ,3 or more children, accordingly.
