I am very concerned with Goulburn Murray Water's pricing of stock and domestic water for rural diverters. Our bill from them this year to access two megalitres of water is \$277, and this has ben flagged to go to \$500.00 within two years. It is important to note that we get no services from GM water, we must provide and maintain our own infrastructure to access and convey water to our homes and stock, they provide NOTHING not even meters. The only thing we receive from GM water is a bill In contrast North east water provide infrastructure, safe water and maintain the network for \$212.00 a year. This is a ludicrous charge from GM water and I urge you to investigate and control this blatant rip off of country people
